Ownership Instructions
These instructions detail how to transfer ownership of the application to another person.

The deployment of the application is managed through Heroku. Heroku can be free through the Github Student Developer Pack. This can be claimed by any TAMU student and gives you enough credits for one year free. This process can be repeated, so you should never have to pay for this service.

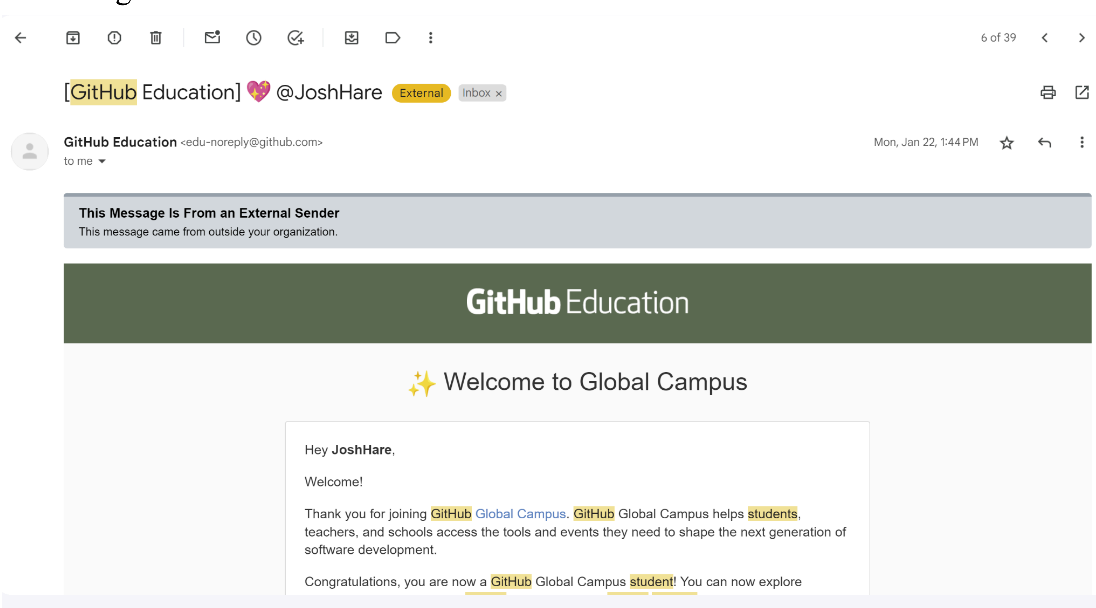
First, you need a Github Account. If you don't already have one, create one here

Next, you need to apply for the Github Student Developer Pack here: '

- Follow the instructions on the screen
- You will need to add your TAMU email to your github account if it isn't there already
- You will need either a photo of your student ID or your VOE which can be obtained on Howdy

You should see a screen that says that your application has been submitted and you will receive an email approval soon.

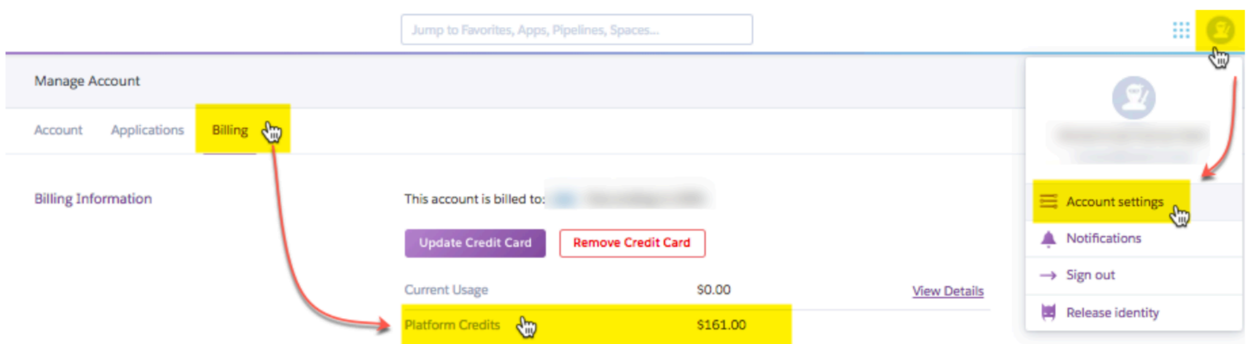
Once you have been approved, you will receive an email in no more than 8 days. It will look something like this:



Now that you have this email, you can create your heroku account. This link here describes the whole process: Heroku Github Student Connection Guide
I will go into more detail here below

1. First you want to create a Heroku developer account:
    - For the role, select Student
    - For the development language, select Ruby.
    - When the account is created, it will ask you to input credit card info. You MUST do this, but your card will not be charged if you are set up properly. The GitHub Student Connection will put credits into your account.
2. Head to this link here:
    - Step 1: Hit the "Verify with Github" Button
    - Follow the prompts until it brings you back to the page with the steps
    - Step 2: This verifies if you have connected a credit card to your account
    - Step 3: Fill this information out and then hit "Send"
    - Once this is done, the credits should be added to your account within 24 hours max. (It probably will take less than ten minutes)

You can verify that you received the credits by clicking on:
- The icon -> "Account Settings" -> "Billing"
- You should have some credits available.



Once you have received the credits, you can now be added to the pipeline.
